Make a page not searchable

How do I make a page so it’s not searchable when someone does a Google search?

- First, go to the page
- In the upper right, click on the **Rank Math** button
- In the dropdown, click from **General** to the **Advanced** tab
- You will see the **ROBOTS META**
- Click the **No Index** and **Nofollow** checkboxes
- For more info on those choices, click the question mark next to each
- Update the page to save your work
