Test page content to existing page

I’m redesigning a page in a test area. How do I move that page when I’m done to replace the old page?

- First, when in the new design, click on the three dots in the upper right of screen
- Click the **Code editor** in the dropdown to switch to code view
- Copy all the code (Ctrl A and Ctrl C)
- Go to the page that you will update
- If you want to keep a copy of the old look, then click duplicate
- Now on the page that you will update, click to edit
- If still in the **Code editor** mode, just hit Ctrl A, then Ctrl V
- Go back to **Visual editor** (back in the three dots dropdown) mode and check your work
- If all is okay, then save and the page will be updated

Revision #3
